Automatic Praise

German auto industry businessman Helmut Stein feels a strong attachment to Jiading District, regarding it as the jumping-off point in his career in China. He's even a big tai chi fan.

Celebrating 50 years of scientific development

Jiading District celebrated the 50th anniversary of its being named a "Scientific Satellite City" at a ceremony recently which featured the presentation of awards to 10 outstanding scientists. Nominators and people who contributed to the district's development, also received awards. The introduction of the large number of scientific research talents has greatly enhanced the development of Jiading.

Jiading space lab aids Shenzhou blastoff

Gu Jialan

It was all smiles and high fives on Friday morning at the Shanghai Space Electronics Co Ltd in Jiading Town which contributed to the success of Shenzhou VII. It researched and produced key components.

"Celebrating the Successful Launch of Zhenzhou VII!" proclaimed a banner.

Shanghai Space Electronic Co Ltd was mainly in charge of the research and production of a temperature-control device and the components of programmed escape control devices for three capsules. All staff worked

hard to complete the tasks successfully.

Senior technician Zhao Jinfei from the No. 4 research office was in charge of research for the fire-control device of the three capsules, the adapter device for returning to the capsule and key components such as voltage transformers.

Research for eight components of three pieces of equipment was carried out simultaneously. Time was limited and quality requirements were very high. Zhao allocated work assignments and coordinated the staff, earning the respect of everyone.

On Thursday night, although the Shenzhou VII launch was successful, designers Chu

Ying and Li Jinhong didn't dare relax. They had been involved in research for the escape equipment of the craft.

Early this year, when testing electricity throughout the craft, the parameters of the programmed control device were found to be abnormal. This could affect the safety of the astronauts.

Immediately Shanghai Space Electronics organized specialists and the designers to analyze the situation. Chu and Li hurried to the testing center in Beijing to clarify the cause of the problem. After extensive research and dozens of tests, they finally determined the real cause and solved the problem.
